

Dynamic Welcome Message

Create a webpage that satisfies the following requirements.

1. Display an input field requesting the user's name.
2. Add a **Submit** button.
3. When the button is clicked:
 - Read the user's name.
 - Validate that the entered name contains **at least four characters**.
 - If valid:
 - Display a personalized welcome message.
 - Hide both the input field and the button.
 - Otherwise:
 - Display an appropriate error message.
 - Highlight the input field.

Provide the

HTML file, JavaScript file and Screenshot of the output

Exercise 2 – Function-Based Counters

Develop a webpage containing three independent counter buttons.

1. Create three buttons labelled:
 - Counter 1
 - Counter 2
 - Counter 3
2. Implement each counter using a different function type:
 - Function declaration
 - Function expression
 - Arrow function
3. Each counter should maintain its own count independently.
4. Display the updated counter value whenever a button is clicked.

Exercise 3 – Dynamic Counter Generator

Using JavaScript only (without predefined HTML buttons):

1. Create multiple counter buttons dynamically.
2. Assign each button:
 - a unique label
 - an independent counter
 - a random background colour
3. Create an **"Show All Totals"** button.
4. When clicked:

- display every button name
- display its counter value
- preserve the corresponding button colour.

Exercise 4 – Dynamic Colour Manager

Create a colour management application.

1. Add a colour picker.
2. Add two buttons:
 - Save Colour
 - List Saved Colours
3. Save every selected colour into an array.
4. Display saved colours as clickable elements.
5. Clicking a colour should:
 - change the page background colour.
6. Clicking a displayed colour should remove it from the page.
